

**Landscape Restoration Team Field Trips:
July 9, 2013: Red Feather Lakes area
July 11, 2013: Rampart Range area**

We very much thank the organizers of the field trips, Dick Edwards on the AR and Jeff Underhill on the Pike, and all of their staff members who contributed their time and expertise on the various projects. Both field trips were very informative for understanding treatment histories and objectives.

The group at the first stop on the Pike, Messenger Gulch 2 post-treatment site.

Also at Messenger Gulch 2 post-treatment site, looking at clumps and openings.

The first stop on the AR, Red Feather 1 Unit 16 (off the Lady Moon trailhead).

Pike, near Messenger Gulch in older treatment.

Messenger Gulch 1 post-treatment; note that this was a leave-tree marking.

The first stop on the AR, Red Feather 1 Unit 16 (this is also where the first picture of this slide show was taken).

The last stop on the Pike, Catamount 1 post-treatment. Note the large openings and landscape context of treatments between ridges.

The group that was on the second trip to the Pike.
