

Winter 2014 Webinar Series

[LANDFIRE](#) and the [Joint Fire Science Program \(JFSP\)](#) have developed a series of webinars that will cross the US in 2014. They are designed to help land managers and others understand and use data resources to assist them when making decisions regarding large landscape projects. Because the suite of LANDFIRE tools is based in vegetation history and current conditions, they can be applied in both fire and non-fire related activities and are especially effective when doing scenario planning and cost-benefit analyses.

Northern Rockies and Southern Rockies Fire Science Networks Webinar Series

February 19: LANDFIRE 101

Randy Swaty, ecologist with The Nature Conservancy's LANDFIRE Project, offers an introduction "**What is this thing called LANDFIRE?**" (aka "**LANDFIRE 101**"), with maps and examples specifically targeted to the Rocky Mountain region – yes, all of it! Noon ET.
